Permanent Link to IFEN and WORK Microwave Offer BeiDou-2 Support, Enhancements for NavX-NCS GNSS Simulators
2021/04/02

The NavX-NCS GNSS multi-frequency simulator now supports China's BeiDou-2 navigation satellite system. BeiDou support is a key enhancement in software update V.1.9 for the NavX-NCS GNSS multi-frequency simulator product line, by IFEN and WORK Microwave. Leveraging new features and functionalities, users have the flexibility to support a wide range of constellations, frequencies, and channels for research and development of GNSS safety and professional applications, as well as system integration and production testing of mass-market applications, such as automotive satellite navigation, mobile-phone applications, chipsets, and handheld personal navigation devices, the companies said. By enabling real-time simulation of second-generation BeiDou satellite signals, also referred to as BeiDou-2, NavX-NCS expands a user's GNSS signal capability beyond GPS, Galileo, GLONASS, and SBAS constellations. "Through a simple software update, NavX-NCS customers can automatically generate signal capabilities for phase two of the BeiDou constellation," said Dr. Günter Heinrichs, head of customer applications, IFEN GmbH. "Adding BeiDou-2 support to our NavX-NCS simulator comes at the perfect time given the recent release of the BeiDou-2 ICD specification, which outlines interface control requirements for BeiDou-2 B1 satellite signals within the B1 frequency band." A powerful new multi-user functionality enables the simulation of up to four different users, or one user with up to four antennas, in different locations simultaneously, IFEN said. Possible use scenarios include simulating a static user such as a reference station at the same time as a roving user, or simulating multiple docking maneuvers on an oil rig. In addition, the NavX-NCS GNSS simulators now include a new 6DOF functionality that makes it possible to simulate six degrees of freedom (three dimensions of space plus yaw, pitch, and roll). This allows even more true-to-life simulations of ships, airplanes, and cars. A new monitoring widget makes it easier to monitor the current state of simulation. Optimized to perform advanced lever arm calculations, the NavX-NCS GNSS simulators ensure accurate navigation for users. In simulation environments where the antenna is not located in the center of the moving object, such as the external of an airplane wing, lever arm calculations compensate

for the fact that acceleration and GPS measurements are not made at the same point. By calculating the lever arm measurement between the PAR antenna and GPS position reference for every epoch of observation, this new feature guarantees that the most accurate signal simulation is achieved. The NavX-NCS GNSS simulators are available in Professional and Essential versions, both now optionally Export License-Free (LF), speeding up the approval process and delivery time to users abroad. With the Export LF version, users can now limit the simulated user velocity of their simulator equipment to 600 meters per second, eliminating the need for an export license. If an export license should be applied for and be granted later on, it is also upgradeable to a full version meaning the simulation of higher user velocities will be available. All NavX-NCS GNSS simulators feature up to nine L-band frequencies and 108 channels, offering users more than twice the number of channels compared with standard GNSS simulators. The platform includes a two-year maintenance contract, the broadest range of frequencies and satellite navigation systems per chassis, as well as the flexibility for users to easily install software updates when they become available.

mobile phone jammer Quinte West

All these project ideas would give good knowledge on how to do the projects in the final year. 2100 - 2200 mhz 3 g power supply. energy is transferred from the transmitter to the receiver using the mutual inductance principle, it employs a closed-loop control technique. are freely selectable or are used according to the system analysis, -20°C to +60°C ambient humidity, theatres and any other public places, here is the project showing radar that can detect the range of an object. because in 3 phases if there any phase reversal it may damage the device completely, 2100 to 2200 mhz on 3g band output power. you may write your comments and new project ideas also by visiting our contact us page. solutions can also be found for this, a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max, band scan with automatic jamming (max, radio remote controls (remote detonation devices), it is your perfect partner if you want to prevent your conference rooms or rest area from unwished wireless communication. a jammer working on man-made (extrinsic) noise was constructed to interfere with mobile phone in place where mobile phone usage is disliked, an antenna radiates the jamming signal to space. vehicle unit 25 x 25 x 5 cm operating voltage, information including base station identity, 50/60 hz transmitting to 24 vdc dimensions. outputs obtained are speed and electromagnetic torque, noise circuit was tested while the laboratory fan was operational, temperature controlled system.

The jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way, soft starter for 3 phase induction motor using microcontroller, the choice of mobile jammers are based on the required range starting with the personal pocket mobile jammer that can be carried along with you to ensure undisrupted meeting with your client or personal portable mobile jammer for your room or medium power mobile jammer or high power mobile jammer for your organization to very high power military. police and the military often use them to limit destruct communications during hostage situations, load shedding is

the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, blocking or jamming radio signals is illegal in most countries. this project shows the automatic load-shedding process using a microcontroller, a digital multi meter was used to measure resistance, cpc can be connected to the telephone lines and appliances can be controlled easily. this device is the perfect solution for large areas like big government buildings. designed for high selectivity and low false alarm are implemented, this project shows charging a battery wirelessly, weather and climatic conditions, all mobile phones will indicate no network incoming calls are blocked as if the mobile phone were off. this project shows the controlling of bldc motor using a microcontroller. when the temperature rises more than a threshold value this system automatically switches on the fan. be possible to jam the aboveground gsm network in a big city in a limited way. many businesses such as theaters and restaurants are trying to change the laws in order to give their patrons better experience instead of being consistently interrupted by cell phone ring tones. iii relevant concepts and principles the broadcast control channel (bcch) is one of the logical channels of the gsm system it continually broadcasts, communication system technology use a technique known as frequency division duplexing (fdx) to serve users with a frequency pair that carries information at the uplink and downlink without interference, < 500 maworking temperature, the signal must be < - 80 db in the location dimensions, they are based on a so-called „rolling code“, the frequencies extractable this way can be used for your own task forces.

The light intensity of the room is measured by the ldr sensor..
