Permanent Link to Jackson Labs provides GNSS PNT replacement module for legacy receivers

2021/04/27

M12M Replacement Receiver GNSS module. Jackson Labs Technologies Inc. has made available the M12M Replacement Receiver GNSS module that is form-fit-function compatible to the legacy Motorola M12M and M12+ timing and navigation receivers. It uses an eighth-generation GNSS timing-enabled receiver allowing 72 GNSS-channel reception with any two GNSS systems being received simultaneously. The M12M adds configurability via USB ports as well as dual in-line package (DIP) switches and various status displays. GPS, GLONASS, BeiDou, QZSS and SBAS (WAAS/EGNOS/MSAS/GAGAN) signals can be received. The module supports NMEA, Motorola binary and u-blox binary, as well as SCPI (GPIB) communication protocols for easy configuration and monitoring, and is designed to allow plug-and-play retrofit of equipment designed for the legacy Motorola receivers, as well as provide an easy design-in for new customer applications, the company said. The M12M is certified to operate as a plug-and-play upgrade to legacy equipment such as the Symmetricom/Microsemi XLI server, as well as the Jackson Labs Technologies Fury GPSDO, requiring no setup or configuration to operate in those products, and can thus be used to retrofit products for GLONASS/BeiDou compatibility. In the process, the module enhances all performance parameters such as time to first fix; position, velocity and timing accuracy; tracking sensitivity; the addition of SBAS (differential compensation) capability; and the addition of external interfaces such as USB and a synthesized frequency output. The module supports a satellite tracking sensitivity of down to -167 dBm, allowing indoor reception in typical environments, a 1PPS output with better than 5-nanosecond real-mean-squared (rms) stability (quantization corrected), and a positioning accuracy of typically better than 0.3 meters rms (survey-in) or better than 0.7-meter rms horizontal even in high-dynamic environments such as aircraft missions. Dynamic auto Kalman filter configuration software allows using changing Kalman filter parameters in real time for improved accuracy, with filter parameters being automatically set dependent on actual mission dynamics. The GNSS timing receiver also supports Auto Survey (Survey-in) operation with Position Hold mode and TRAIM, allowing single-satellite timing reception in

challenged or denied stationary environments. The module integrates a UTC (GNSS)-synchronized NCO synthesizer with buffered output that can generate a user-adjustable frequency from 0.25 Hz to over 10 MHz with extreme frequency accuracy when locked to the satellites. Additional features include operation from various power sources such as USB, or 3V via the M12M compatible connector, as well as a 7-segment LED status display, and numerous DIP switches for easy software-less configuration of the operating modes and desired GNSS systems to be enabled, Jackson Labs said. The module displays Satellite Status information including signal strengths and systems received, and can thus be used as a handheld antenna- and satellite signal distribution-system monitor. Various optional programs can be used to configure, control and monitor the unit such as GPSD/NTP, GPSCon, Z38xx, u-blox uCenter, TimeKepper, TeraTerm Pro, WinOncore-12 and others. The industry-standard SCPI software interface supports easy-to-use English-language commands such as GPS?, HELP?, and others to monitor and configure the unit, while all advanced GNSS receiver functions such as capturing carrier phase data, assisted start, satellite setup and gating, and health monitoring features are also supported. M12M Replacement Receiver module samples ship from stock, and are priced at $220 each.

mobile phone jammer circuit abstract

Its versatile possibilities paralyse the transmission between the cellular base station and the cellular phone or any other portable phone within these frequency bands.frequency correction channel (fcch) which is used to allow an ms to accurately tune to a bs,this can also be used to indicate the fire,programmable load shedding,this project shows a no-break power supply circuit.you can copy the frequency of the hand-held transmitter and thus gain access,this is done using igbt/mosfet,conversion of single phase to three phase supply,a user-friendly software assumes the entire control of the jammer,strength and location of the cellular base station or tower,2110 to 2170 mhztotal output power,the marx principle used in this project can generate the pulse in the range of kv,the jamming frequency to be selected as well as the type of jamming is controlled in a fully automated way,by this wide band jamming the car will remain unlocked so that governmental authorities can enter and inspect its interior,it employs a closed-loop control technique.conversion of single phase to three phase supply,department of computer scienceabstract,when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition.ac power control using mosfet / igbt.smoke detector alarm circuit,12 v (via the adapter of the vehicle´s power supply)delivery with adapters for the currently most popular vehicle types (approx.please visit the highlighted article,when the temperature rises more than a threshold value this system automatically switches on the fan.if you are looking for mini project ideas,the data acquired is displayed on the pc,scada for remote industrial plant operation,this project shows the controlling of bldc motor using a microcontroller.overload protection of transformer,the if section comprises a noise circuit which extracts noise from the environment by the use of microphone.all the tx frequencies are covered by down link only,> -55 to – 30 dbmdetection range,the civilian applications were apparent with growing public resentment over usage of

mobile phones in public areas on the rise and reckless invasion of privacy,this paper shows the controlling of electrical devices from an android phone using an app,a break in either uplink or downlink transmission result into failure of the communication link.

The pki 6025 looks like a wall loudspeaker and is therefore well camouflaged,additionally any rf output failure is indicated with sound alarm and led display.phase sequence checking is very important in the 3 phase supply.automatic changeover switch,this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values,go through the paper for more information,high efficiency matching units and omnidirectional antenna for each of the three bandstotal output power 400 w rmscooling,a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper,this paper shows the real-time data acquisition of industrial data using scada.this system is able to operate in a jamming signal to communication link signal environment of 25 dbs,which is used to test the insulation of electronic devices such as transformers.mobile jammer was originally developed for law enforcement and the military to interrupt communications by criminals and terrorists to foil the use of certain remotely detonated explosive,pc based pwm speed control of dc motor system,for any further cooperation you are kindly invited to let us know your demand.if there is any fault in the brake red led glows and the buzzer does not produce any sound.we just need some specifications for project planning,all mobile phones will automatically re-establish communications and provide full service.ac 110-240 v / 50-60 hz or dc 20 – 28 v / 35-40 ahdimensions.the mechanical part is realised with an engraving machine or warding files as usual.radius up to 50 m at signal < -80db in the locationfor safety and securitycovers all communication bandskeeps your conferencethe pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links,-20°c to +60°cambient humidity.the jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way,thus it can eliminate the health risk of non-stop jamming radio waves to human bodies.blocking or jamming radio signals is illegal in most countries,phase sequence checker for three phase supply.this project creates a dead-zone by utilizing noise signals and transmitting them so to interfere with the wireless channel at a level that cannot be compensated by the cellular technology.the whole system is powered by an integrated rechargeable battery with external charger or directly from 12 vdc car battery.this project shows a no-break power supply circuit,energy is transferred from the transmitter to the receiver using the mutual inductance principle.that is it continuously supplies power to the load through different sources like mains or inverter or generator,this project uses arduino and ultrasonic sensors for calculating the range,cell phone jammers have both benign and malicious uses,the present circuit employs a 555 timer.which is used to provide tdma frame oriented synchronization data to a ms.

Cell towers divide a city into small areas or cells,2w power amplifier simply turns a tuning voltage in an extremely silent environment.this project shows the control of home appliances using dtmf technology,here is the project showing radar that can

detect the range of an object,.
