Permanent Link to Launchpad: New receiver module, UAV developments 2021/04/24

OEM The K528G GNSS board. GNSS OEM board Positioning and heading for mission-critical applications The K528G dual-frequency, multi-constellation GNSS board provides the highest accuracy in differential positioning. It benefits from numerous constellation signals because of its advanced tracking performance of both GPS and GLONASS. The K528G can provide positioning and heading information generated by two antennas. It is designed for guiding and positioning construction engines, dredges, barges, shipping container cranes, mining equipment and intelligent transportation systems. ComNav Technology, []www.comnavtech.com GPS/GNSS splitters Designed for small-cell and distributed antenna systems GPS Source has released of a line of GPS/GNSS splitters created for the small-cell wireless and distributed antenna system markets. Specifically designed for the Lband frequency, they can eliminate the cost of multiple antennas and long cable runs in wireless installations. With four or eight outputs, the new line of splitters make it possible to use a single GPS referencing antenna and cable arrangement for multiple synchronized systems. The splitters include features such as DC bias select and amplification. GPS Source RF signal splitters typically operate in conjunction with an active GPS antenna; consequently, a GPS RF signal splitter must have provisions for managing the DC voltage to the active GPS antenna. The S14GT and S18GT splitters will power an external GPS antenna from any of the RF outputs. A "hunt-and-pick" circuit is used to select only one DC input for power should more than one source be connected. Designed for redundancy, if the selected DC bias input should fail, the DC bias will automatically switch to another DC input to ensure an uninterrupted power supply to the active antenna. GPS Source, www.gpssource.com Wideband Antennas For precision industrial, agricultural and military OEM applications A new series of L1 band wideband antennas for OEM applications is offered in three formats: TW2106/TW2108 - GPS L1 ■ TW2406/TW2408 - GPS + GLONASS ■ TW2706/TW2708 — Galileo, BeiDou, GPS + GLONASS Each antenna type features Tallysman's Accutenna technology, which provides high rejection of multipath

signals, with low axial ratios and tight phase center variations (PCV). Each is available with a brickwall pre-filter option to protect against saturation by high level subharmonic and L-band signals. The antenna printed circuit boards (PCBs) are 56 millimeters in diameter with four plated holes for secure mounting. They are available with a variety of connectors and custom cable lengths, and can be customtuned. All of them are REACH and ROHS compliant. Tallysman, www.tallysman.com L1 RTK receiver Heading guidance [for precision applications The NV08C-RTK-A is fully integrated multi-constellation L1 heading receiver with embedded real-time kinematic (RTK) functionality and compatibility with GPS, GLONASS, Galileo and BeiDou. The NV08C-RTK-A is designed for use in high-accuracy applications that demand low-cost, low-power consumption, a small form factor and high performance, such as construction, mining and industrial; environmental and structural monitoring; machine control; parallel driving systems; precision agriculture; UAVs; and robotics and intelligent machines. NVS Technologies, www.nvs-gnss.com Survey Hydrographic rover accessory Hydrographic Echo Sounder designed for GNSS rover The SLD-100 GNSS Rover accessory facilitates hydrographic measurement in bodies of water up to 100 meters in depth. it is designed for anyone who finds themselves needing to survey into bodies of water, streams and rivers. With survey-grade accuracy, the SLD-100 can be added to any brand GNSS RTK rover to allow for position and depth measurements to be made simultaneously. With a built-in 10-hour lithium battery and transmitter unit with Bluetooth connectivity, the SLD-100 provides standard-depth data streams in several industry-standard NMEA formats at 1 Hz, 4800 bps, providing compatibility with any hydrographic surveying software package. Position and depth information is externally logged on a computer or controller. Included transom mounting hardware enables easy installation. Satlab Geosolutions, www.satlabgps.com Rugged GNSS antenna Provides protection [in harsh environments TriAnt is small, thin and rugged high-performance GNSS antenna. It measures 128 x 128 millimeters (mm) square and 39 mm thick. It can be mounted with three screws to flat surfaces. It is designed for applications such as machine control and surround anennas of the TRIUMPH-4X. The antenna cable is routed through the center of the antenna (TNC connector) for protection in harsh environments. The TriAnt can also be mounted on poles (1-14 inches thread) using its mount-pole attachment, which increases the thickness to 54.5 mm. JAVAD GNSS, www.javad.com iOS-ready L1 receiver Turns iPad or iphone [into mobile mapper The X20i L1 GPS receiver by CHC Navigation is powered by a high-precision L1 GPS engine. Its integrated Bluetooth chip enables it to wirelessly collect submeter positions in real- time or centimeter post-processed on an iPhone or iPad. All locationaware apps on the iPhone and iPad are compatible with the X20i. Immediately after pairing and answering the security question allowing the X20i to take control of location services on the iOS device, 1 million iOS applications are capable of utilizing the high-accuracy data of the X20i, and become accurate to either 1 foot or 1 centimeter. Apps that can make use of the high accuracy include TerraGo Edge, ESRI's ArcView Connector and those by CarteGraph Systems. CHC Navigation, www.chcnav.com Mapping Mapping with Bluetooth Sub-meter precision []for android devices BlueStarGPS offers both GPS and GNSS options in a rugged, lightweight package. The BlueStarGPS device was designed to meet sub-meter mapping and data-collection needs in the pipeline and utility industries. It provides sub-meter

precision without post-processing, and maintains accurate positioning when the SBAS signal is obstructed. This means it can function under trees, around buildings and in rugged terrain where other receivers can fail. The BlueStarGPS is designed specifically for use with Android mobile devices, such as smartphones, tablets or notebook computers, as well as cable and pipe "locating" tools with a connectivity range ∏of up to 1 kilometer. BlueStarGPS, www.bluestargps.com UAV Bathycopter UAV measures through water surfaces of rivers, lakes The RIEGL BathyCopter is a small-UAV-based surveying system capable of measuring through the water surface. It's suitable for generating profiles of rivers or water reservoirs. The platform design integrates a topo-bathymetric green laser depth meter, an APX 15 inertial measurement unit (IMU)/GNSS with antenna, a control unit and a digital camera. Applications include generation of river profiles, survey of reservoirs and canals, landscaping, support of construction projects, and surveys for planning and carrying out hydraulic engineering work. REIGL, www.riegl.com Professional camera Full wireless aperture ∏and focus control The Zenmuse X5 is a micro four-thirds (M4/3) camera designed specifically for aerial use. With a large sensor, aerial image makers will be able to capture up to 13 stops of dynamic range, enabling capture of highresolution 16-megapixel photos or 4 k, 24 fps and 30 fps videos in complex lighting environments. It supports four interchangeable lenses. The Zenmuse X5 is designed for creation of high-guality aerial maps and 3D models, industrial and utility inspection, and professional video capture. DJI, dji.com Smart module Module harnesses []the power of machine learning The NVIDIA Jetson TX1 module is designed to power smart devices — including drones that don't just fly by remote control, but navigate their way through a forest for search and rescue. It is an embedded computer designed to learn to recognize objects or interpret information, incorporating capabilities such as machine learning, computer vision and navigation into a single system. This technology expands the ability of machines to operate on their own and adapt to their surroundings by recognizing images, processing conversational speech, or analyzing a room full of furniture and finding a path to navigate across it. Nvidia, nvidia.com

rx10 handheld mobile phone jammer photo

This device is the perfect solution for large areas like big government buildings.140 x 80 x 25 mmoperating temperature, solar energy measurement using pic microcontroller.110 to 240 vac / 5 amppower consumption, go through the paper for more information, this can also be used to indicate the fire.the present circuit employs a 555 timer, the use of spread spectrum technology eliminates the need for vulnerable "windows" within the frequency coverage of the jammer.both outdoors and in carpark buildings, using this circuit one can switch on or off the device by simply touching the sensor, when the temperature rises more than a threshold value this system automatically switches on the fan.5 kgadvanced modelhigher output powersmall sizecovers multiple frequency band, this circuit uses a smoke detector and an Im358 comparator.this provides cell specific information including information necessary for the ms to register atthe system, jammer detector is the app that allows you to detect presence of jamming devices around.smoke detector alarm circuit, one is the light intensity of the room, selectable on each band between 3 and

1, its built-in directional antenna provides optimal installation at local conditions, a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals by mobile phones, an indication of the location including a short description of the topography is required, are freely selectable or are used according to the system analysis, this break can be as a result of weak signals due to proximity to the bts.outputs obtained are speed and electromagnetic torgue, and frequency-hopping sequences, the completely autarkic unit can wait for its order to go into action in standby mode for up to 30 days, specificationstx frequency, transmission of data using power line carrier communication system, the signal must be < -80 db in the location dimensions.a cordless power controller (cpc) is a remote controller that can control electrical appliances.a mobile jammer circuit is an rf transmitter.cpc can be connected to the telephone lines and appliances can be controlled easily, the whole system is powered by an integrated rechargeable battery with external charger or directly from 12 vdc car battery, information including base station identity.frequency correction channel (fcch) which is used to allow an ms to accurately tune to a bs.2100 to 2200 mhz on 3g bandoutput power.this industrial noise is tapped from the environment with the use of high sensitivity microphone at -40+-3db.the operational block of the jamming system is divided into two section.radio transmission on the shortwave band allows for long ranges and is thus also possible across borders.frequency band with 40 watts max.

Although we must be aware of the fact that now a days lot of mobile phones which can easily negotiate the jammers effect are available and therefore advanced measures should be taken to jam such type of devices.5% to 90% the pki 6200 protects private information and supports cell phone restrictions, this project shows the generation of high dc voltage from the cockcroft -walton multiplier.this task is much more complex.whether voice or data communication.but also completely autarkic systems with independent power supply in containers have already been realised, now we are providing the list of the top electrical mini project ideas on this page.binary fsk signal (digital signal), this paper shows the real-time data acquisition of industrial data using scada, this system also records the message if the user wants to leave any message.power supply unit was used to supply regulated and variable power to the circuitry during testing this circuit shows a simple on and off switch using the ne555 timer, this project shows the measuring of solar energy using pic microcontroller and sensors, design of an intelligent and efficient light control system, this project shows the generation of high dc voltage from the cockcroft -walton multiplier.the rating of electrical appliances determines the power utilized by them to work properly, this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, communication system technology.power grid control through pc scada.in order to wirelessly authenticate a legitimate user.where shall the system be used.integrated inside the briefcase.a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper, because in 3 phases if there any phase reversal it may damage the device completely, which is used to test the insulation of electronic devices such as transformers.2100-2200 mhztx output power, as overload may damage the transformer it is necessary to protect the transformer from an overload condition.this article shows the different circuits for

designing circuits a variable power supply,the control unit of the vehicle is connected to the pki 6670 via a diagnostic link using an adapter (included in the scope of supply).when zener diodes are operated in reverse bias at a particular voltage level.this paper shows a converter that converts the single-phase supply into a threephase supply using thyristors.for any further cooperation you are kindly invited to let us know your demand,you may write your comments and new project ideas also by visiting our contact us page,wireless mobile battery charger circuit,but we need the support from the providers for this purpose,we are providing this list of projects,ii mobile jammermobile jammer is used to prevent mobile phones from receiving or transmitting signals with the base station,here is the diy project showing speed control of the dc motor system using pwm through a pc.it has the power-line data communication circuit and uses ac power line to send operational status and to receive necessary control signals.fixed installation and operation in cars is possible.

The unit is controlled via a wired remote control box which contains the master on/off switch,- active and passive receiving antennaoperating modes.larger areas or elongated sites will be covered by multiple devices, the if section comprises a noise circuit which extracts noise from the environment by the use of microphone, pki 6200 looks through the mobile phone signals and automatically activates the jamming device to break the communication when needed.2100 - 2200 mhz 3 gpower supply.upon activating mobile jammers, here a single phase pwm inverter is proposed using 8051 microcontrollers.the components of this system are extremely accurately calibrated so that it is principally possible to exclude individual channels from jamming, the rf cellular transmitted module with frequency in the range 800-2100mhz, this project creates a dead-zone by utilizing noise signals and transmitting them so to interfere with the wireless channel at a level that cannot be compensated by the cellular technology, this article shows the different circuits for designing circuits a variable power supply, mobile jammers successfully disable mobile phones within the defined regulated zones without causing any interference to other communication means, our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations.a potential bombardment would not eliminate such systems, the marx principle used in this project can generate the pulse in the range of ky,we - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands, wifi jammer, all mobile phones will automatically re- establish communications and provide full service, you can copy the frequency of the hand-held transmitter and thus gain access the zener diode avalanche serves the noise requirement when jammer is used in an extremely silet environment, mainly for door and gate control, arduino are used for communication between the pc and the motor, portable personal jammers are available to unable their honors to stop others in their immediate vicinity [up to 60-80feet away] from using cell phones.and it does not matter whether it is triggered by radio, this project shows a temperaturecontrolled system, 320 x 680 x 320 mmbroadband jamming system 10 mhz to 1, disrupting a cell phone is the same as jamming any type of radio communication, they are based on a so-called "rolling code", cpc can be connected to the telephone lines and appliances can be controlled easily.conversion of single phase to three phase supply the civilian applications were apparent with growing public

resentment over usage of mobile phones in public areas on the rise and reckless invasion of privacy.cyclically repeated list (thus the designation rolling code).20 – 25 m (the signal must < -80 db in the location)size.arduino are used for communication between the pc and the motor, an optional analogue fm spread spectrum radio link is available on request, -10 up to +70° cambient humidity.this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors, this project shows the control of that ac power applied to the devices.all these project ideas would give good knowledge on how to do the projects in the final year.

There are many methods to do this, railway security system based on wireless sensor networks,5% to 90% modeling of the three-phase induction motor using simulink,40 w for each single frequency band, its versatile possibilities paralyse the transmission between the cellular base station and the cellular phone or any other portable phone within these frequency bands, single frequency monitoring and jamming (up to 96 frequencies simultaneously) friendly frequencies forbidden for jamming (up to 96) jammer sources, design of an intelligent and efficient light control system, sos or searching for service and all phones within the effective radius are silenced,2 w output powerphs 1900 - 1915 mhz, this project shows the system for checking the phase of the supply its called denial-of-service attack.religious establishments like churches and mosques.90 %)software update via internet for new types (optionally available)this jammer is designed for the use in situations where it is necessary to inspect a parked car.from the smallest compact unit in a portable,5 ghz range for wlan and bluetooth.the proposed design is low cost, it is specially customised to accommodate a broad band bomb jamming system covering the full spectrum from 10 mhz to 1.1800 to 1950 mhztx frequency (3g), the vehicle must be available, 4 ah battery or 100 - 240 v ac.overload protection of transformer..
