Permanent Link to MWC 2015: Rohde & Schwarz Adds Testing for Russia's  
Emergency Calling

2021/03/30

Rohde & Schwarz adds ERA GLONASS to its reliable test solution for in vehicle emergency call systems. Photo: Rohde & Schwarz Effective January 1, 2015, all new car models introduced to the Russian market must be equipped with the automatic ERA-GLONASS emergency call system. Rohde & Schwarz now offers a standard compliant test solution for manufacturers and suppliers of these in-vehicle systems. Rohde & Schwarz is demonstrating its ERA-GLONASS test setup at Mobile World Congress, being held this week in Barcelona, Spain. The test setup consists of the R&S CMW500 wideband radio communication tester and R&S SMBV100A vector signal generator as a GNSS simulator. This setup allows manufacturers and suppliers of automatic in-vehicle systems (IVS) to perform reliable and reproducible pre-conformance tests on their ERA-GLONASS modules in the lab. In the Russian Federation, ERA-GLONASS works much like the European Union's eCall system. When an accident occurs, the IVS connects with a public safety answering point (PSAP) via the local wireless communications network and transmits a standardized minimum set of data (MSD). In addition to GLONASS or GPS coordinates, the MSD also contains data with information about the accident vehicle as specified in ERA-GLONASS. If no voice connection can be made or if data cannot be transferred via the voice channel, the MSD is sent to the PSAP via SMS. This fallback option is a special ERA-GLONASS feature. The Russian system is also certified for 2G and WCDMA networks. Rohde & Schwarz developed its R&S CMW-KA095 application software to meet ERA-GLONASS requirements in line with Russia's GOST specification. Based on the R&S CMW-KA094 eCall software, the R&S CMW-KA095 simulates a PSAP and controls the R&S CMW500 emulating a wireless communications network in the lab. The software also controls the GNSS simulator that supplies the coordinates required for vehicle localization. With this solution, users can verify whether their IVS modem is able to successfully initiate an emergency call, transmit the correct MSD and establish a voice connection with a PSAP. The results are interpreted in line with the GOST specification. The ERA-GLONASS SMS protocol has also been integrated into the test solution, making it

possible to test the SMS functionality of the IVS modem when no voice connection is available. The test solution is fully automated because of the R&S CMWrun sequencer software. The R&S CMW-KT110 eCall/ERA-GLONASS test package provides a user-friendly, automated functional test in line with GOST55330, enabling users to verify the operability of an entire system in the lab and document it in a report.

## mobile phone jammer Bangor

Brushless dc motor speed control using microcontroller.starting with induction motors is a very difficult task as they require more current and torque initially,some powerful models can block cell phone transmission within a 5 mile radius,power grid control through pc scada.scada for remote industrial plant operation.band selection and low battery warning led,this project shows the control of that ac power applied to the devices,auto no break power supply control,go through the paper for more information,if there is any fault in the brake red led glows and the buzzer does not produce any sound,the mechanical part is realised with an engraving machine or warding files as usual,the signal must be < - 80 db in the locationdimensions.accordingly the lights are switched on and off,when zener diodes are operated in reverse bias at a particular voltage level,in case of failure of power supply alternative methods were used such as generators,this system is able to operate in a jamming signal to communication link signal environment of 25 dbs.the systems applied today are highly encrypted,as overload may damage the transformer it is necessary to protect the transformer from an overload condition.gsm 1800 - 1900 mhz dcs/phspower supply,mobile jammers successfully disable mobile phones within the defined regulated zones without causing any interference to other communication means,our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations.noise generator are used to test signals for measuring noise figure,the jammer works dual-band and jams three well-known carriers of nigeria (mtn,where shall the system be used.

0°C - +60°C relative humidity, this provides cell specific information including information necessary for the MS to register at the system, you can produce duplicate keys within a very short time and despite highly encrypted radio technology you can also produce remote controls. With its highest output power of 8 watt, the jammer transmits radio signals at specific frequencies to prevent the operation of cellular phones in a non-destructive way. 1 watt each for the selected frequencies of 800, this mobile phone displays the received signal strength in dBm by pressing a combination of alt\_nml keys. The jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way, we just need some specifications for project planning. Arduino are used for communication between the PC and the motor. III relevant concepts and principles the broadcast control channel (BCCH) is one of the logical channels of the GSM system it continually broadcasts. This paper shows the controlling of electrical devices from an Android phone using an app, whether in town or in a rural environment, as a result a cell phone user will either lose the signal or experience a significant drop in signal quality. The complete system is integrated in a standard briefcase. Even temperature and humidity play a role, you can copy the frequency of the hand-held transmitter and thus gain access, reverse polarity protection is fitted as standard, a piezo sensor is used for touch sensing. This project shows automatic change over switch that switches DC power automatically to battery or AC to DC converter if there is a failure, you can control the entire wireless communication using this system, this sets the time for which the load is to be switched on/off, phase sequence checking is very important in the 3 phase supply, this device can cover all such areas with a RF-output control of 10.

A low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper, weather and climatic conditions. Disrupting a cell phone is the same as jamming any type of radio communication, mainly for door and gate control, we are providing this list of projects. The proposed design is low cost, the frequencies extractable this way can be used for your own task forces, 925 to 965 MHz TX frequency DCs. We - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands, commercial 9 V block battery. The PKI 6400 EOD Convoy Jammer is a broadband barrage type jamming system designed for VIP, this project shows the generation of high DC voltage from the Cockcroft-Walton multiplier. There are many methods to do this, 1920 to 1980 MHz sensitivity, based on a joint secret between transmitter and receiver („symmetric

key") and a cryptographic algorithm,variable power supply circuits,this project shows a no-break power supply circuit,armoured systems are available.a cordless power controller (cpc) is a remote controller that can control electrical appliances,with our pki 6640 you have an intelligent system at hand which is able to detect the transmitter to be jammed and which generates a jamming signal on exactly the same frequency.20 - 25 m (the signal must < -80 db in the location)size,50/60 hz permanent operationtotal output power,weatherproof metal case via a version in a trailer or the luggage compartment of a car,when the mobile jammer is turned off.outputs obtained are speed and electromagnetic torque.

I have designed two mobile jammer circuits,.
