Special Section, March 2015. Download a PDF of this section, with the Simulator Product Showcase. CAST Navigation CAST-SGX GPS Satellite Simulator The SGX GPS satellite signal simulator from CAST Navigation. Photo: CAST Navigation The SGX GPS satellite signal simulator from CAST Navigation provides the user with dynamic, repeatable GPS RF signals for use in the laboratory or in the field for a wide range of GPS applications. The SGX simulator is housed in a portable, lightweight, handheld enclosure measuring 7 x 11 x 3 inches and weighing just over 4 pounds. The SGX is lightweight and portable, operates on AC or battery power, and features 16 channels of L1 C/A and P codes. Based on CAST's technology that has been developed for use in the company's larger military products, it is extremely accurate and repeatable. The SGX is controlled via an intuitive touchscreen interface that allows the user to select, start, and stop scenarios, change screen views, and change satellite RF power levels while a scenario is running. Three test scenarios are delivered with the simulator. XGEN Plus Scenario Generation Software. This software gives the user the ability to generate custom scenarios for use with the SGX. The software allows for complete control over GPS almanac, ephemeris, and all satellite error sources. The user can select from a variety of vehicle types and simulate static or dynamic motion. The user can also employ antenna gain patterns and vehicle silhouettes if desired. The user can generate a customized high precision six-degree-of-freedom trajectory simply by defining a mission profile that is based on raw maneuvers, waypoints, Google Maps or a combination of these maneuver types.The new scenarios can be downloaded via USB port or SD card interfaces. CAST has been in the GPS simulation and support business for more than 30 years, designing, developing, manufacturing, and integrating innovative GPS/INS simulators and associated test equipment for government, military, prime vendor, and consumer markets. www.castnav.com; phone: 978 858-0130; email: sales@castnav.com Cobham AvComm (formerly Aeroflex) GPSG-1000 — Portable GPS/Galileo/SBAS Positional Simulator AeroflexGPSG-1000: Portable GPS/Galileo/SBAS Positional Simulator Photo: Galileo Designed to be a versatile yet affordable satellite simulator, the GPSG-1000 is proving to be a vital instrument used by those validating and

testing GNSS receivers in a variety of applications within the transportation, consumer electronics, aerospace and military industry segments, to name a few. The GPSG-1000 is a single carrier, multi-channel GPS/Galileo simulator that is portable and ruggedized so it can be safely and confidently deployed in a variety of outdoor and indoor environments. The unit is available in a 6- or 12-channel configuration, and supports the following GNSS signals: L1, L1C, L2C, L5, E1, E5, E5a, E5b and SBAS (WAAS and EGNOS). The GPSG-1000 can be directly connected to a GNSS receiver under test. It can also simulate actual "open-sky" situations whereby the unit can generate its signals through the included antenna coupler system that isolates and transmits to the UUT's antenna(s). Utilizing an integrated GPS receiver, the GPSG-1000 simulates actual time of day and date as well as the real constellation that would be available for navigation at that specific point in time. Multiple almanacs and route files can be saved to the GPSG's memory, thereby enabling current and past history dynamic motion, constellation environment creation/recreation and other significant troubleshooting capabilities. During any given static or dynamic simulation, space vehicle parametrics and health can be user controlled. The GPSG-1000 features a touchscreen user interface that can be remotely hosted via an integrated Ethernet port. The unit uses a rechargeable, Lithium Ion battery enabling hours of untethered use, and can also be used while the battery is recharging. ats.aeroflex.com; phone: (316) 522-4981 or (800) 835-2352; email: info-test@aeroflex.com IFEN Inc. NavX-NCS Professional GNSS Simulator NavX-NCS Essential GNSS Simulator The NavX-NCS Professional GNSS Simulator by IFEN. Photo: IFEN The absolute flexibility of the NavX-NCS Professional GNSS Simulator allows it to be configured with up to 108 channels and all of the following signals: GPS L1/L2/L5 C/A & P code and L2C GLONASS G1/G2 standard & high accuracy codes Galileo E1/E5/E6 (BOC/CBOC/AltBOC) BeiDou B1/B2/B3 SBAS L1/L5 (WAAS, EGNOS, MSAS, GAGAN) QZSS L1 & L1-SAIF IMES The user is enabled to assign signals freely to any of the RF modules fitted to the simulator. This allows the same hardware to be used in a range of different configurations. Signals may be added by software license with no need to return the hardware for upgrade. Up to four independent RF outputs may be fitted, enabling the user to simulate multiple antenna locations simultaneously (allowing simulation of multiple antennas on one vehicle, multiple vehicles simultaneously, a mixture of static locations and mobile vehicles, and multiple antenna elements for Controlled Reception Pattern Antenna [CRPA] testing). The comprehensive and easy-to-use Control Center operating software allows the operator to quickly create realistic test scenarios for effective testing of user equipment. IFEN also offers the NavX-NCS Essential GNSS Simulator, which is available with 21 or 42 channels and is capable of simulating GPS L1 (including SBAS L1), GLONASS G1, Galileo E1, BeiDou B1, QZSS L1, and IMES. The simulator is also supplied with Control Center operating software for comprehensive scenario generation. www.ifen.com For USA and Canada: Mark Wilson; phone: 951-739-7331; email: m.wilson@ifen.com Racelogic LabSat 3 Triple Constellation Simulator RaceLogic LabSat 3. Photo: RaceLogic LabSat 3 from Racelogic is a low cost, stand-alone, battery powered, multi-constellation RF record-and-replay device, designed to assist GNSS engineers in the development and testing of their products. With its small size and all-in-one design, LabSat 3 makes it easier than ever to collect raw satellite data in the same

environment that end users experience in everyday use. This enables repeatable and realistic testing to be carried out under controlled conditions. LabSat 3 doesn’t need to be connected to a PC in order to record live-sky GNSS signals. With one-touch recording to SD card and a two-hour battery life, it can be used in any outdoor location to create real-world scenarios, for eventual replay back in the lab. As well as being able to simultaneously record or replay GPS, GLONASS, BeiDou, QZSS, Galileo, and SBAS signals, it can log CAN Bus, serial, or digital data, embedded alongside the satellite information. This additional information can then be replayed alongside the GNSS output, with synchronization to within 60 ns. A 1PPS signal can also be generated using the internal GPS receiver. LabSat 3 can be used as a replay system out of the box with a set of 60 pre-recorded scenarios supplied as part of the package, recorded from various locations around the globe. Additionally, SatGen software, a demo version of which is available from the LabSat website, allows for scenario generation of user-defined trajectories, with precise control over velocity, heading, height, and constellation profiles. Routes are also easily created in Google Maps, and the software also supports NMEA and KML file import. SatGen gives test engineers the ability to develop their products using simulations that would be difficult or impossible to record due to geographic location or safety constraints. LabSat 3 is available as a record and replay, or replay-only version; either one, two, or three constellation types generate a single, dual, or triple constellation file. LabSat is currently used by many leading manufacturers of GPS chipsets, portable navigation devices, smartphones, and by major car companies in their test, development and production processes. www.labsat.co.uk; phone: +44 (0)1280 823803 Rohde & Schwarz R&S SMBV100A: GNSS Simulator in Vector Signal Generator The R&S SMBV100A: GNSS Simulator in Vector Signal Generator. Photo: R&S The GNSS simulator in the vector signal generator R&S SMBV100A is designed for development, verification and production of GNSS chipsets, modules and receivers. The simulator supports all possible scenarios, from simple setups with individual, static satellites all the way to flexible scenarios generated in real time with up to 24 dynamic GPS, GLONASS, Galileo, BeiDou and QZSS satellites. GNSS simulator with support of GPS L1/L2 (C/A and P code), GLONASS L1/ L2, Galileo E1, BeiDou and QZSS L1, including hybrid constellations. Real-time simulation of realistic constellations with up to 24 satellites and unlimited simulation time. Flexible scenario generation including moving scenarios, dynamic power control and atmospheric modeling. Configuration of realistic user environments, including obscuration and multipath, antenna characteristics and vehicle attitude. Static mode for basic receiver testing using signals with zero or constant Doppler shift. Support of Assisted GNSS (A-GNSS) test scenarios, including generation of assistance data for GPS, GLONASS, Galileo, BeiDou and QZSS. Real-time external trajectory feed for hardware in the loop (HIL) applications. High signal dynamics, simulation of spinning vehicles and precision code (P-code) simulations to support aerospace and defense applications. Enhanced simulation capabilities for aerospace applications by supporting ground-based augmentation systems (GBAS). Support of other digital communications and radio standards in the same instrument. www.rohde-schwarz.com; email: customersupport@rohde-schwarz.com Spectracom Afforable, Flexible and User-Friendly GNSS Simulators The Spectracom family of simulators. Photo: Spectracom Spectracom GNSS Simulators support test and

development programs from simple manufacturing tests to multi-output testing across the diverse ecosphere of industries relying on GNSS technology. Spectracom's innovation allows users of any skill level full control over the GNSS constellation, vehicle motion/attitude and signal path complications such as atmospherics and multipath to develop complex scenarios. Typical test conditions include: Clock errors Data errors "Real-world" motion from embedded Google Maps In-band noise generation Multipath Signal obstructions calculated from 3D building models "Current time" simulation Real-time HIL testing Easy synchronization for multi-output testing Automative download of the current almanac Antenna pattern effects Inertial sensor testing Assisted GNSS testing No dedicated PC is required. Scenarios are run and managed from the front panel, SCPI commands, or any PC/tablet via a web interface. Users can select a flexible, field upgradeable Spectracom simulator, and then purchase the software options they need. GSG-6 Series multi-frequency, advanced GNSS simulator is powerful enough for any cutting-edge test program. GPS, GLONASS, Galileo, Beidou, QZSS and IRNSS signals are available across multiple frequencies. The GSG-6 is designed for military, research or professional applications. GSG-5 Series multi-constellation L1-band GNSS simulator is designed for commercial development/integration programs. If a user is developing commercial products with GNSS capability, the GSG-5 will shorten test programs with confidence. GSG-51 single channel signal generator is designed for one purpose — fast, simple go/no-go manufacturing test and validation, ensuring the manufacturing line is operating at full capacity with confidence in quality. www.spectracom.com; email: sales@spectracomcorp.com; phone: 585-321-5800 Spirent Federal Systems GNSS Simulators Spirent's GSS9000 constellation simulator. Photo: Spirent Spirent provides simulators that cover all applications, including research and development, integration/verification and production testing. GSS9000. The newly released Spirent GSS9000 multi-frequency, multi-GNSS RF constellation simulator can simulate signals from all GNSS and regional navigation. The GSS9000 offers a four-fold increase in RF signal iteration rate (SIR) over Spirent's GSS8000 simulator. The GSS9000 SIR is 1000 Hz (1 ms), enabling higher dynamic simulations with more accuracy and fidelity. It includes support for restricted and classified signals from the GPS and Galileo systems, as well as advanced capabilities for ultra-high dynamics. It can evaluate resilience of navigation systems to interference and spoofing attacks, and has the flexibility to reconfigure constellations, channels and frequencies between test runs or test cases. Hardware changes can be done in the field, supported by the new on-board calibrator module. The GSS9000 is extensible and can support the widest range of carriers, ranging codes and data streams for the Galileo, GPS, GLONASS, and BeiDou systems, as well as regional/augmentation systems. Multi-antenna/multi-vehicle simulation, for differential-GNSS and attitude determination, and interference/jamming and spoofing testing are also supported. CRPA Test System. Spirent's Controlled Reception Pattern Antenna (CRPA) Test System generates both GNSS and interference signals. Users can control multiple antenna elements. Null-steering and space/time adaptive CRPA testing are both supported by this comprehensive approach. GSS6425. The Spirent GSS6425 RPS quickly and simply records complex real-world RF environments, capturing both GNSS signals and atmospheric/interference effects. These environments can then be replayed repeatedly to the hardware software under test,

reducing project, travel and engineering costs. www.spirentfederal.com; Jeff Martin, Director of Sales; Kalani Needham, Sales Manager; email: info@spirentfederal.com; phone: 801-785-1448; fax: 801-785-1294

phone jammer cheap mobile

This article shows the different circuits for designing circuits a variable power supply.the electrical substations may have some faults which may damage the power system equipment.your own and desired communication is thus still possible without problems while unwanted emissions are jammed,the operational block of the jamming system is divided into two section.zigbee based wireless sensor network for sewerage monitoring,several noise generation methods include,the light intensity of the room is measured by the ldr sensor,such as propaganda broadcasts,when the mobile jammer is turned off,a mobile phone might evade jamming due to the following reason,2110 to 2170 mhztotal output power,this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors.you can control the entire wireless communication using this system,90 % of all systems available on the market to perform this on your own,here is the diy project showing speed control of the dc motor system using pwm through a pc,when shall jamming take place.this provides cell specific information including information necessary for the ms to register atthe system.although we must be aware of the fact that now a days lot of mobile phones which can easily negotiate the jammers effect are available and therefore advanced measures should be taken to jam such type of devices,the jammer works dual-band and jams three well-known carriers of nigeria (mtn.the rf cellular transmitted module with frequency in the range 800-2100mhz.this can also be used to indicate the fire,this project uses an avr microcontroller for controlling the appliances,because in 3 phases if there any phase reversal it may damage the device completely,the proposed system is capable of answering the calls through a pre-recorded voice message,the pki 6085 needs a 9v block battery or an external adapter,rs-485 for wired remote control rg-214 for rf cablepower supply,6 different bands (with 2 additinal bands in option)modular protection.the jammer covers all frequencies used by mobile phones,ac 110-240 v / 50-60 hz or dc 20 – 28 v / 35-40 ahdimensions.

Designed for high selectivity and low false alarm are implemented,one of the important sub-channel on the bcch channel includes,the present circuit employs a 555 timer,ac power control using mosfet / igbt,prison camps or any other governmental areas like ministries,vswr over protectionconnections,all these security features rendered a car key so secure that a replacement could only be obtained from the vehicle manufacturer,this project shows the control of that ac power applied to the devices,a potential bombardment would not eliminate such systems,if there is any fault in the brake red led glows and the buzzer does not produce any sound,specificationstx frequency.its total output power is 400 w rms,a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals,military camps and public places.presence of buildings and landscape,this device can cover all such areas with a rf-output control of 10,this project shows the system for checking the phase of the supply,depending on the vehicle manufacturer,this paper shows the controlling of electrical devices from an

android phone using an app.the first types are usually smaller devices that block the signals coming from cell phone towers to individual cell phones,a cordless power controller (cpc) is a remote controller that can control electrical appliances,with our pki 6640 you have an intelligent system at hand which is able to detect the transmitter to be jammed and which generates a jamming signal on exactly the same frequency.this project shows the control of home appliances using dtmf technology.the proposed system is capable of answering the calls through a pre-recorded voice message,the data acquired is displayed on the pc,intermediate frequency(if) section and the radio frequency transmitter module(rft),mobile jammer was originally developed for law enforcement and the military to interrupt communications by criminals and terrorists to foil the use of certain remotely detonated explosive,for any further cooperation you are kindly invited to let us know your demand,control electrical devices from your android phone.

This paper shows the controlling of electrical devices from an android phone using an app,so that we can work out the best possible solution for your special requirements,over time many companies originally contracted to design mobile jammer for government switched over to sell these devices to private entities.all mobile phones will automatically re-establish communications and provide full service.solar energy measurement using pic microcontroller,0°c – +60°crelative humidity..
